Assignment #2 BRIGHT Ethiopia students

2.1 Make a “quick and dirty” situation analysis of your basin, with a specific focus on the people living in your basin:

- Identify different groups of people that currently reside in your basin, and the basin’s resources they currently benefit from.

If applicable, also identify people that benefit from the basin’s resources who do not reside in the basin.

List how the different people/stakeholders are affecting the water resources

- Identify the major challenges that the identified people currently experience with accessing/enjoying certain basin resources
- Rank stakeholders in terms of influence

2.2 Create a map (on paper) visualizing:

- Major stocks and flows of water (river, groundwater, rain, other)
- Where (groups of) people listed in 2.1 are located in the basin
- How they affect (use, pollute, ...) water and how they are affected by (scarcity, floods, pollution,) water
