

Unit 6.2 Planning of Integrated FSM Systems

1. INTRODUCTION

This Unit corresponds with Chapter 17 of the FSM book. Over the years, many sanitation projects and programmes have failed because of the lack of an integrated planning and this unit therefore looks at how that could be rectified. An integrated planning approach in FSM can help planners or engineers to bind together the different FSM activities in a logical and structured manner.

The Chapter was prepared by Philippe Reymond of EAWAG; the key note speech of this Unit is prepared by Christoph Luethi, Head of SANDEC.

2. LEARNING OBJECTIVES

The learning objectives for Unit 6.2 Assessment of the Initial Situation are to:

- Understand the importance of an integrated approach for faecal sludge management.
- Learn how to plan a faecal sludge management on a city-level, including a logical framework of necessary activities.
- Understand how to select context appropriate options and to determine the critical selection factors in each specific context.
- Be able to link the different aspects developed in the FSM book (e.g. management, finance, stakeholders' interests, technology, local context) and understand how they are connected and influence each other.

3. THINGS TO DO; PLACES TO GO

In order to complete this Unit successfully, please do the following:

- Watch the key note speech of Unit 6.2
- Go through the PowerPoint presentation of Unit 6.2
- Read Chapter 17 of the FSM book
- Check the Course page for any recommended reading materials or web pages
- Check the assignment list
