1. INTRODUCTION	1		
Mark C.M. van Loosdrecht, Per H. Nielsen, Carlos M. Lopez-Vazquez and Damir Brdjanovic (aut.)			
2. ACTIVATED SLUDGE ACTIVITY TESTS	7		
Carlos M. Lopez-Vazquez, Laurens Welles, Tommaso Lotti, Elena Ficara, Eldon R. Rene, Tessa P.H. van den Brand, Damir Brdjanovic and Mark C.M. van Loosdrecht (aut.)			
Yves Comeau, Piet N.L. Lens and Nancy G. Love (rev.)			
2.1 INTRODUCTION	7		
2.2 ENHANCED BIOLOGICAL PHOSPHORUS REMOVAL	9		
2.2.1 Process description	9		
2.2.2 Experimental set-up	11		
2.2.2.1 Reactors	11		
2.2.2.2 Activated sludge sample collection	16		
2.2.2.3 Activated sludge sample preparation	16		
2.2.2.4 Substrate	17		
2.2.2.5 Analytical procedures	19		
2.2.2.6 Parameters of interest	22		
2.2.3 EBPR batch activity tests: Preparation	22		
2.2.3.1 Apparatus	22		
2.2.3.2 Materials	24		
2.2.3.3 Media preparation	24		
2.2.3.4 Material preparation	25		
2.2.3.5 Activated sludge preparation	28		
2.2.4 Batch activity tests: Execution	29		
2.2.4.1 Anaerobic EBPR batch activity tests	30		
2.2.4.2 Anoxic EBPR batch tests	33		
2.2.4.3 Aerobic EBPR batch tests	34		
2.2.5 Data analysis	36		
2.2.5.1 Estimation of stoichiometric parameters	36		
2.2.5.2 Estimation of kinetic parameters	41		
2.2.6 Data discussion and interpretation	42		
2.2.6.1 Anaerobic batch activity tests	42		
2.2.6.2 Aerobic batch activity tests	45		
2.2.6.3 Anoxic batch activity tests	46		
2.2.7 Example	47		
2.2.7.1 Description	47		
2.2.7.2 Data analysis	47		
2.2.8 Additional considerations	51		
2.2.8.1 GAO occurrence in EBPR systems	51		
2.2.8.2 The effect of carbon source	51		
2.2.8.3 The effect of temperature	51		
2.2.8.4 The effect of pH	52		
2.2.8.5 Denitrification by EBPR cultures	52		
2.2.8.6 Excess and shortage of intracellular compounds	52		
2.2.8.7 Excessive aeration	53		
2.2.8.8 Shortage of essential ions	53		
2.2.8.9 Toxicity/inhibition	53		
2.3 BIOLOGICAL SULPHATE REDUCTION	54		
2.3.1 Process description	54		
2.3.2 Sulphide speciation	56		
2.3.3 Effects of environmental and operating conditions on SRB	57		
2.3.3.1 Carbon source	57		
2.3.3.2 COD to SO ₄ ²⁻ ratio	58		
2.3.3.3 Temperature	58		
2.3.3.4 pH	59		
2.3.3.5 Oxygen	59		
2.3.4 Experimental set-up	60		
2.3.4.1 Estimation of volumetric and specific rates	60		
2.3.4.2 The reactor	60		
2.3.4.3 Mixing	61		
2.3.4.4 pH control	61		
2.3.4.5 Temperature control	61		
2.3.4.6 Sampling and dosing ports	62		
2.3.4.7 Sample collection	62		
2.3.4.8 Media	62		
2.3.5 Analytical procedures	63		
2.3.5.1 COD _{organics} and COD _{total}	63		
2.3.5.2 Sulphate	64		
2.3.5.3 Sulphide	64		
2.3.6 SRB batch activity tests: preparation	65		
2.3.6.1 Apparatus	65		
2.3.6.2 Materials	65		
2.3.6.3 Media	65		
2.3.6.4 Material preparation	66		
2.3.6.5 Mixed liquor preparation	67		
2.3.6.6 Sample collection and treatment	68		
2.3.7 Batch activity tests: execution	68		
2.3.8 Data analysis	69		
2.3.8.1 Mass balances and calculations	69		
2.3.8.2 Data discussion and interpretation	70		
2.3.9 Example	70		
2.3.10 Practical recommendations	72		
2.4 BIOLOGICAL NITROGEN REMOVAL	73		
2.4.1 Process description	73		
2.4.1.1 Nitrification	74		
2.4.1.2 Denitrification	75		
2.4.1.3 Anaerobic ammonium oxidation (Anammox)	76		
2.4.2 Process-tracking alternatives	76		
2.4.2.1 Chemical tracking	77		
2.4.2.2 Titrimetric tracking	77		
2.4.2.3 Manometric tracking	78		
2.4.3 Experimental set-up	79		
2.4.3.1 Reactors	79		
2.4.3.2 Instrumentation for titrimetric tests	79		
2.4.3.3 Instrumentation for manometric tests	80		
2.4.3.4 Activated sludge sample collection	81		
2.4.3.5 Activated sludge sample preparation	82		
2.4.3.6 Substrate	82		
2.4.3.7 Analytical procedures	83		
2.4.3.8 Parameters of interest	83		
2.4.3.9 Type of batch tests	86		
2.4.4 Nitrification batch activity tests: Preparation	86		
2.4.4.1 Apparatus	86		
2.4.4.2 Materials	86		
2.4.4.3 Media preparation	86		
2.4.5 Nitrification batch activity tests: Execution	87		
2.4.6 Denitrification batch activity tests: Preparation	92		
2.4.6.1 Apparatus	92		
2.4.6.2 Materials	93		
2.4.6.3 Working solutions	93		
2.4.6.4 Materials preparation	93		
2.4.7 Denitrification batch activity tests: Execution	93		
2.4.8 Anammox batch activity tests: Preparation	99		

2.4.8.1 Apparatus	99	3.4.1.4 Data processing	151
2.4.8.2 Materials	99	3.4.1.5 Recommendations	151
2.4.8.3 Working solutions	99	3.4.2 Biochemical oxygen demand (BOD)	152
2.4.8.4 Materials preparation	100	3.4.2.1 Purpose	152
2.4.9 Anammox batch activity tests: Execution	100	3.4.2.2 General	152
2.4.10 Examples	103	3.4.2.3 Test execution	153
2.4.10.1 Nitrification batch activity test	103	3.4.3 Short-term biochemical oxygen demand (BOD _{st})	157
2.4.10.2 Denitrification batch activity test	105	3.4.3.1 Test execution	158
2.4.10.3 Anammox batch activity test	107	3.4.3.2 Calculations	160
2.4.11 Additional considerations	109	3.4.4 Toxicity and inhibition	160
2.4.11.1 Presence of other organisms	109	3.4.4.1 Purpose	160
2.4.11.2 Shortage of essential micro- and macro-nutrients	109	3.4.4.2 Test execution	160
2.4.11.3 Toxicity or inhibition effects	110	3.4.4.3 Calculations	161
2.4.11.4 Effects of carbon source on denitrification	110	3.4.4.4 Biodegradable toxicants	162
2.5 AEROBIC ORGANIC MATTER REMOVAL	111	3.4.5 Wastewater fractionation	163
2.5.1 Process description	111	3.4.5.1 Readily biodegradable substrate (S_b)	166
2.5.2 Experimental set-up	112	3.4.5.2 Slowly biodegradable substrate (X_{Cb})	167
2.5.2.1 Reactors	112	3.4.5.3 Heterotrophic biomass (X_{OH0})	168
2.5.2.2 Activated sludge sample collection	112	3.4.5.4 Autotrophic (nitrifying) biomass (X_{ANO})	168
2.5.2.3 Activated sludge sample preparation	113	3.4.5.5 Ammonium (S_{NH4})	168
2.5.2.4 Media	113	3.4.5.6 Organic nitrogen fractions ($X_{C-B,N}$ and $S_{B,N}$)	168
2.5.2.5 Analytical tests	114	3.5 BIOMASS CHARACTERIZATION	169
2.5.2.6 Parameters of interest	114	3.5.1 Volatile suspended solids	169
2.5.3 Aerobic organic matter batch activity tests: Preparation	115	3.5.2 Specific methanogenic activity (SMA)	169
2.5.3.1 Apparatus	115	3.5.2.1 Purpose	169
2.5.3.2 Materials	115	3.5.2.2 General	169
2.5.3.3 Working solutions	115	3.5.2.3 Test execution	169
2.5.3.4 Material preparation	116	3.5.2.4 Data processing	170
2.5.3.5 Activated sludge preparation	117	3.5.3 Specific aerobic and anoxic biomass activity	171
2.5.4 Aerobic organic matter batch activity tests: Execution	117	3.5.3.1 Maximum specific nitrification rate (AUR)	171
2.5.5 Data analysis	118	3.5.3.2 Maximum specific aerobic heterotrophic respiration rate (OUR)	173
2.5.6 Example	119	3.5.3.3 Maximum specific denitrification rate (NUR)	173
2.5.6.1 Description	119	4. OFF-GAS EMISSION TESTS	177
2.5.6.2 Data analysis	119	Kartik Chandran, Eveline I.P. Volcke, Mark C.M. van Loosdrecht (aut.)	
2.5.7 Additional considerations and recommendations	121	Peter A. Vanrolleghem and Sylvie Guillot (rev.)	
2.5.7.1 Simultaneous storage and microbial growth	121	4.1 INTRODUCTION	177
2.5.7.2 Lack of nutrients	121	4.2 SELECTING THE SAMPLING STRATEGY	178
2.5.7.3 Toxicity or inhibition	121	4.2.1 Plant performance	178
3. RESPIROMETRY	133	4.2.2 Seasonal variations in emissions	178
Henry Spanjers and Peter A. Vanrolleghem (aut.)		4.2.3 Sampling objective	179
George A. Ekama and M. Spérandio (rev.)		4.3 PLANT ASSESSMENT AND DATA COLLECTION	179
3.1 INTRODUCTION	133	4.3.1 Preparation of a sampling campaign	179
3.1.1 Basics of respiration	134	4.3.2 Sample identification and data sheet	180
3.1.2 Basics of respirometry	135	4.3.3 Factors that can limit the validity of the results	181
3.2 GENERAL METHODOLOGY OF RESPIROMETRY	136	4.3.4 Practical advice for analytical measurements	181
3.2.1 Basics of respirometric methodology	136	4.3.5 General methodology for sampling	182
3.2.2 Generalized principles: beyond oxygen	136	4.3.6 Sampling in the framework of the off-gas measurements	183
3.2.2.1 Principles based on measuring in the liquid phase	136	4.3.7 Testing and measurements protocol	185
3.2.2.2 Principles based on measuring during the gas phase	138	4.4 EMISSION MEASUREMENTS	185
3.3 EQUIPMENT	141	4.5 N₂O MEASUREMENT IN OPEN TANKS	186
3.3.1 Equipment for anaerobic respirometry	141	4.5.1 Protocol for measuring the surface flux of N ₂ O	188
3.3.1.1 Biogas composition	141	4.5.1.1 Equipment, materials and supplies	188
3.3.1.2 Measuring the gas flow	142	4.5.1.2 Experimental procedure	188
3.3.2 Equipment for aerobic and anoxic respirometry	143	4.5.1.3 Sampling methods for nitrogen GHG emissions	189
3.3.2.1 Reactor	143	4.5.1.4 Direct measurement of the liquid-phase N ₂ O content	191
3.3.2.2 Measuring arrangement	143	4.6 MEASUREMENT OF OFF-GAS FLOW IN OPEN TANKS	191
3.3.2.3 Practical implementation	144	4.6.1 Protocol for aerated or aerobic zone	192
3.4 WASTEWATER CHARACTERIZATION	150	4.6.2 Protocol for non-aerated zones	192
3.4.1 Biomethane potential (BMP)	150	4.7 AQUEOUS N₂O and CH₄ CONCENTRATION DETERMINATION	192
3.4.1.1 Purpose	150		
3.4.1.2 General	150		

4.7.1 Measurement protocol for dissolved N ₂ O measurement using polarographic electrodes	193	6.2.1.2 Equipment	237
4.7.1.1 Equipment	193	6.2.1.3 The sludge volume index (SVI)	237
4.7.1.2 Experimental procedure	193	6.2.1.4 The diluted sludge volume index (DSVI)	237
4.7.2 Measurement protocol for dissolved gasses using gas chromatography	194	6.2.1.5 The stirred specific volume index (SSVI _{3.5})	238
4.7.3 Measurement protocol for dissolved gas measurement by the salting-out method	194	6.2.2 The batch settling curve and hindered settling velocity	238
4.7.3.1 Equipment	195	6.2.2.1 Goal and application	238
4.7.3.2 Sampling procedure	195	6.2.2.2 Equipment	239
4.7.3.3 Measurement procedure	195	6.2.2.3 Experimental procedure	239
4.7.3.4 Calculations	196	6.2.2.4 Interpreting a batch settling curve	240
4.7.4 Measurement protocol for dissolved gas measurement by the stripping method	196	6.2.2.5 Measuring the hindered settling velocity	241
4.7.4.1 Operational principle	196	6.2.3 v _{hs} -X relation	241
4.7.4.2 Equipment	197	6.2.3.1 Goal and application	241
4.7.4.3 Calibration batch test	198	6.2.3.2 Equipment	242
4.7.4.4 Measurement accuracy	198	6.2.3.3 Experimental procedure	242
4.7.4.5 Calculation of the N ₂ O formation rate in the stripping device	198	6.2.3.4 Determination of the zone settling parameters	243
4.8 DATA ANALYSIS AND PROCESSING	199	6.2.3.5 Calibration by empirical relations based on SSPs	244
4.8.1 Determination of fluxes	199	6.2.4 Recommendations for performing batch settling tests	245
4.8.2 Determination of aggregated emission fractions	199	6.2.4.1 Shape and size of the batch reservoir	245
4.8.3 Calculation of the emission factors	200	6.2.4.2 Sample handling and transport	245
5. DATA HANDLING AND PARAMETER ESTIMATION	201	6.2.4.3 Concentration range	245
Gürkan Sin and Krist V. Gernaey (aut.)		6.2.4.4 Measurement frequency	245
Sebastiaan C.F. Meijer and Juan A. Baeza (rev.)		6.2.5 Recent advances in batch settling tests	245
5.1 INTRODUCTION	201	6.3 MEASURING FLOCCULATION STATE OF ACTIVATED SLUDGE	246
5.2 THEORY AND METHODS	202	6.3.1 DSS/FSS test	246
5.2.1 Data handling and validation	202	6.3.1.1 Goal and application	246
5.2.1.1 Systematic data analysis for biological processes	202	6.3.1.2 Equipment	246
5.2.1.2 Degree of reduction analysis	203	6.3.1.3 DSS test	246
5.2.1.3 Consistency check of experimental data	204	6.3.1.4 FSS test	247
5.2.2 Parameter estimation	205	6.3.1.5 Interpretation of a DSS/FSS test	248
5.2.2.1 Manual trial and error method	205	6.3.2 Recommendations	249
5.2.2.2 Formal statistics methods	205	6.3.2.1 Flocculation conditions	249
5.2.3 Uncertainty analysis	209	6.3.2.2 Temperature influence	249
5.2.3.1 Linear error propagation	209	6.3.2.3 Supernatant sampling	249
5.2.3.2 The Monte Carlo method	209	6.3.3 Advances in the measurement of the flocculation state	250
5.2.4 Local sensitivity analysis and identifiability analysis	210	6.4 MEASURING THE SETTLING BEHAVIOUR OF GRANULAR SLUDGE	250
5.2.4.1 Local sensitivity analysis	210	6.4.1 Goal and application	250
5.2.4.2 Identifiability analysis using the collinearity index	210	6.4.2 Equipment	251
5.3 METHODOLOGY AND WORKFLOW	211	6.4.3 Density measurements	251
5.3.1 Data consistency check using elemental balance and a degree of reduction analysis	211	6.4.4 Granular biomass size determination	252
5.3.2 Parameter estimation workflow for non-linear least squares method	212	6.4.4.1 Sieving	252
5.3.3 Parameter estimation workflow for the bootstrap method	212	6.4.4.2 Image analyser	253
5.3.4 Local sensitivity and identifiability analysis workflow	213	6.4.5 Calculating the settling velocity of granules	253
5.3.5 Uncertainty analysis using the Monte Carlo method and linear error propagation	213	6.4.6 Recommendations	254
5.4 ADDITIONAL EXAMPLES	214	6.4.6.1 Validation of results	254
5.5 ADDITIONAL CONSIDERATIONS	232	6.4.6.2 Application for flocculent sludge	255
6. SETTLING TESTS	235	6.5 MEASURING SETTLING VELOCITY DISTRIBUTION IN PSTs	255
Elena Torfs, Ingmar Nopens, Mari K.H. Winkler, Peter A. Vanrolleghem, Sophie Balemans and Ilse Y. Smets (aut.)		6.5.1 Introduction	255
Glenn T. Daigger and Imre Takács (rev.)		6.5.2 General principle	255
6.1 INTRODUCTION	235	6.5.3 Sampling and sample preservation	256
6.2 MEASURING SLUDGE SETTLEABILITY IN SSTs	236	6.5.4 Equipment	256
6.2.1 Sludge settleability parameters	237	6.5.5 Analytical protocol	257
6.2.1.1 Goal and application	237	6.5.6 Calculations and result presentation	258
		6.5.6.1 Mass balance check	258
		6.5.6.2 Calculation of the settling velocity distribution	258
		6.5.6.3 Recommendations	259
		7. MICROSCOPY	263
		Jeppe L. Nielsen, Robert J. Seviour and Per H. Nielsen (aut.)	
		Jiji Wanner (rev.)	
		7.1 INTRODUCTION	263
		7.2 THE LIGHT MICROSCOPE	263
		7.2.1 Standard applications of light microscopy	265

7.2.2 Low power objective	265	8.3.7.3 Results	296
7.2.3 High power objective	265	8.4 AMPLICON SEQUENCING	297
7.2.4 Immersion objective	265	8.4.1 General considerations	297
7.2.5 Important considerations	266	8.4.2 The 16S rRNA gene as a phylogenetic marker gene	297
7.2.6 Bright-field and dark-field illumination	266	8.4.3 PCR amplification	299
7.2.7 Fluorescence microscopy	267	8.4.3.1 PCR reaction	299
7.2.8. Confocal laser scanning microscopy	269	8.4.3.2 PCR biases	300
7.3 MORPHOLOGICAL INVESTIGATIONS	269	8.4.3.3 Primer choice	300
7.3.1 Microscopic 'identification' of filamentous microorganisms	270	8.4.4 DNA sequencing	301
7.3.2 'Identification' of protozoa and metazoa	271	8.4.4.1 Sequencing platform	301
7.4 EXAMINING ACTIVATED SLUDGE SAMPLES MICROSCOPICALLY	272	8.4.4.2 Sequencing depth	301
7.4.1 Mounting the activated sludge sample	272	8.4.5 Bioinformatic processing	301
7.4.2 Gram staining	273	8.4.5.1 Available software	301
7.4.2.1 Reagents and solutions for Gram staining	273	8.4.5.2 Raw data	302
7.4.2.2 Procedure	274	8.4.5.3 Quality scores and filtering	303
7.4.3 Neisser staining	274	8.4.5.4 Merging paired end-reads	303
7.4.3.1 Reagents and solutions for Neisser staining	274	8.4.5.5 OTU clustering	303
7.4.3.2 Procedure	275	8.4.5.6 Chimera detection and removal	304
7.4.4 DAPI staining	275	8.4.5.7 Taxonomic classification	304
7.4.4.1 Reagents and solutions for DAPI staining	275	8.4.5.8 The OTU table	304
7.4.4.2 Procedure	275	8.4.6 Data analysis	304
7.4.5 CTC staining	276	8.4.6.1 Defining the goal of the data analysis	304
7.4.5.1 Reagents and solutions for CTC staining	276	8.4.6.2 Data validation and sanity check	305
7.4.5.2 Procedure	276	8.4.6.3 Communities or individual species?	305
7.5 FLUORESCENCE <i>in situ</i> HYBRIDIZATION	276	8.4.6.4 Identifying core and transient species	306
7.5.1 Reagents and solutions for FISH	277	8.4.6.5 Explorative analysis using multivariate statistics	306
7.5.2 Procedure	278	8.4.6.6 Correlation analysis	307
7.6 COMBINED STAINING TECHNIQUES	280	8.4.6.7 Effect of treatments on individual species	307
7.6.1 FISH-DAPI staining	281	8.4.7 General observations	307
7.6.1.1 Reagents and solutions for DAPI staining	281	8.4.7.1 A relative analysis	307
7.6.1.2 Procedure	281	8.4.7.2 Copy number bias	307
7.6.2 FISH-PHA staining	282	8.4.7.3 Primer bias	307
7.6.2.1 Reagents and solutions for PHA staining	282	8.4.7.4 Standardization	308
7.6.2.2 Procedure	282	8.4.7.5 Impact of the method	308
8. MOLECULAR METHODS	285	8.4.8 Protocol: Illumina V1-3 16S rRNA amplicon libraries	308
Søren M. Karst, Mads Albertsen, Rasmus H. Kirkegaard, Morten S. Dueholm and Per H. Nielsen (aut.) Holger Daims (rev.)		8.4.8.1 Apparatus	308
